SUBJECT INDEX TO VOLUME 2

A

Ammonium sulfate test, respiratory tract secretions interfering with, 323-333
 Anaphylaxis, passive cutaneous, 85-95
 Anemia (autoimmune hemolytic) in mice, model of, 241-250
 Antibody (homologous), reaction with DNP-insulin, 565-571
 Anti-D, immunoadsorbent for enrichment of, 597-605
 Antigen with native thymocytes, interaction in a completely *in vitro* system, 255-263
 Antigen ("weak" histocompatibility), skin graft rejection following transfer of cells sensitized to, 393-402
 Anti-hapten responses, Ig class distribution, 1-14
 Anti-L serum, 193-212
 Anti-p-azobenzenearsonate antibodies, affinity labeling of, 383-391
 Antithymocyte serum treatment of hamsters inoculated with measles virus, 303-321
 Arginine esterase activity of kallikrein, 93-103

B

Basophil chemotaxis, 421-429
 B cells in lymphoid tissues in mice, 25-34
 B cells, presence of β_2 -microglobulin on, 403-414
 Bovine thrombin, lack of reactivity on components of complement system, 473-481
 Bromoacetyl derivations of homologous hapten, 383-391

C

Carcinoembryonic antigen, 15-24
 separation from tumor, fetal gut, meconium and normal color, 213-226

C

Complement system, lack of reactivity of purified bovine and human thrombin on components of, 473-481
 C1423, influence of, on contact angle and phagocytosis of sensitized encapsulated bacteria, 415-419
 Contact angle of encapsulated bacteria, 415-419
 Cryoprecipitation antigen in acute serum sickness, 77-83
 Cryoproteins in acute serum sickness, 77-83
 Culture reactions in mouse thymus cells, mixed leukocyte, 255-263
 Cyclic AMP, effects of, on mitogen-induced RNA synthesis, 353-360

D

Delayed hypersensitivity skin reaction sites, eosinophils in, 615-620
 Double diffusion technique, for demonstrating common antigenic component in ovarian carcinomas, 173-184
 DNA in phytohaemagglutinin-stimulated human peripheral blood lymphocytes, synthesis and fragmentation of, 277-285
 DNA (reiterative), changes of immunization in hybridization with mouse spleen RNA, 449-461
 DNP-insulin, reaction with homologous antibody, 565-571

E

Encephalitogenic basic protein in myelin, 163-172
 Encephalitogenic protein in guinea pigs, immune response to, 185-192
 Encephalomyelitis (allergic) in guinea pigs, immune response to, 185-192
 Endotoxins, chemically modified crude, 43-56

SUBJECT INDEX

E

- Enterobacterial antigen, immune response of guinea pigs to, 495-506
- Eosinophils in delayed hypersensitivity skin reaction sites, 615-620

F

- Farr method, for coprecipitating antigen-antibody complexes with ammonium sulfate, 323-333
- Ficoll-Hypaque density solution, separation of viable from non-viable tumor cells using, 473-472

G

- Glycoproteins isolated by phenol-water partition of human erythrocyte membranes, comparison of, 35-42

H

- Hapten-erythrocyte conjugates, Ig class distribution in anti-hapten responses to, 1-14
- Hapten (homologous), bromoacetyl derivations of, 383-391
- Histamine release, in rat, 85-91
- HL-A antigens from peripheral blood leukocytes, solubilities of, 141-149
- HL-A9 subdivisions, linear and non-linear, 57-64
- Human peripheral blood lymphocytes, effects of cyclic AMP and theophylline on mitogen-induced RNA synthesis in, 353-360
- Human polymorphonuclear leukocytes, release of kinin-forming enzyme from, 547-564
- Human thrombin, lack of reactivity of or components of complement system, 473-481
- H-Y antigen in mice, 151-161
- Hybridization of mouse spleen RNA and reiterative DNA, 449-451

I

- Ig class distribution in anti-hapten responses, 1-15
- IgM subunits in the presence and absence of J chain, reassociation of, 105-113
- ¹²⁵I-Iodo-deoxyuridine, tumor target cells labelled with, 483-493
- Iodacetate, immunologic responsiveness of AKR mice to, 343-352
- Iodoprotein (27S), ultracentrifugal and immunological comparisons of, 371-382
- Immune complexes, in acute serum sickness,, 77-83
- Immune elimination, in acute serum sickness, 77-83
- Immune precipitates, release of kinin-forming enzyme from human polymorphonuclear leukocytes following interaction with, 547-564
- Immune response, effect of plasmacytoma RNA on, 129-139
- to encephalitogenic protein in guinea pigs, 185-192
- Immune response of guinea pigs to common enterobacterial antigen, 495-506
- Immune response period (primary), 585-595
- Immune surveillance of lymphoid tissue, 119-127
- Immunoadjuvant activity of bacterial fractions, 585-595
- Immunoabsorbent for enrichment of anti-D and other blood group antibodies, 597-605
- Immuno-electron microscopic localization of encephalitogenic basic protein in myelin, 163-172
- Immunofluorescence technique, for demonstrating common antigenic component in ovarian carcinomas, 173-184
- Immunoglobulins (surface) of circulating lymphocytes in mouse plasmacytoma, 129-139
- Immunological responses to sheep red blood cells, 607-613
- Immunologic techniques (quantitative), platelet aggregation as a, 65-76

I

Immunostimulation-inhibitor of tumor cells growth in vitro, 483-493
Isoantigen (male) in mice, serological approach to study of, 151-161

K

Kinin-forming enzyme, release of, 547-564

L

Lithium diiodosalicylate, isolation of glycoprotein by, 35-42
Lymphocyte cultures (stimulated), augmentation of basophil chemotaxis by a factor from, 421-429
Lymphocyte reaction (mixed), biological role for, 119-127
Lymphocytotoxicity of anti- β_2 -microglobulin sera, 403-413
Lymphoid tissue, immune surveillance of, 119-127

M

Macrophages with normal activity, permanent line of, 441-447
Measles virus, antithymocyte serum treatment of hamsters inoculated with, 303-321
Meconium, activity of, 15-24
Membrane immunofluorescence with purified lymphoid cells, 25-34
Metabolic state on immune-hemolysis of L-positive low potassium sheep red blood cells, effect of, 193-212
Microtiter plates, miniature PHA assay using, 507-519
 β_2 -Microglobulin on B- and T-cells, presence of, 403-414
Migration inhibition reaction, quantitative aspects of, 287-296
Mouse reaginic antibodies in rat, 85-91
Murine leukemia plasma virus, 297-302
Myoid cell antibody in rheumatic fever, 227-230

N

Neuraminidase on rat one-way mixed lymphocyte interaction, effect of, 573-583
"Non-New Zealand" strains of Rauscher leukemogenic virus, role of genetic factors in, 527-534
Normal colon extract, 15-24

O

One-way mixed lymphocyte interaction, effect of neuraminidase on, 527-534
Ovarian carcinomas, common antigenic component in, 173-184

P

Peripheral blood leukocytes, solubilization of HL-A antigens from, 141-149
Phagocytosis as surface phenomenon, 415-419
Phenol-water extraction of human erythrocyte membrane, 35-42
Phytohemagglutinin assay using disposable microtiter plates, 507-519
Plasmacytoma (mouse), surface immunoglobulins of circulating lymphocytes in, 129-139
Platelet aggregates as quantitative immunologic technique, 65-76
Pneumococcal polysaccharide in monkeys, 361-370
Prekallikrein activators, simple assay for, 93-103
Primary antibody response, macrophages with normal activity in, 441-447

R

Rabbit serum complement, 193-212
Rauscher leukemogenic virus, induction of antinuclear antibodies in mice inoculated with, 527-534
Respiratory tract secretions interfering with ammonium sulfate test, 323-333
Responsiveness, inheritance of, 231-240 (immunologic) of AKR mice to iodoacetate and iodacetate-treated tumor cells, 343-352

SUBJECT INDEX

R

- Rheumatic fever, myoid cells anti-body in, 227-230
- RNA (mouse spleen), changes after immunization in hybridization with DNA, 449-461
- RNA (plasmacytoma), effect of on immune response, 129-139
- RNA synthesis, effects of cyclic AMP and theophylline on mitogen-induced, 353-360

S

- Serial dilution, linear and non-linear HL-A9 subdivisions generated by, 52-64
- Serological approach to study of male isoantigen in mice, 151-161
- Sheep-erythrocyte-stimulated mice, increased frequency of thymus-derived cells in spleens of, 535-546
- Skin graft rejection following transfer of cells sensitized to "weak" histocompatibility antigen, 393-402
- Subacute sclerosing panencephalitis, 303-321

T

- T Cells, in lymphoid tissues in mice, 25-34
- presence of β_2 -microglobulin on, 403-414
- Thymus-derived cells in spleen, increased frequency of, 535-546
- Thyroglobulin (human), ultracentrifugal and immunological comparisons of, 371-382
- Tolerance to Type III pneumococcal polysaccharide in monkeys, 361-370
- Typhoid vaccines, chemically modified crude endotoxins as possible, 43-56
- Trypanosomal lipopolysaccharide, immunological properties of, 265-276
- T. (S.) cruzi, effects of trypanosomal lipopolysaccharide on infection with, 265-276
- Tumor extract, 15-24

U

- Uremia (induced chronic) of rats, 607-613

W

- Waldenstrom macroglobulin, IgM subunits and J chains, 105-113

IMMUNE RESPONSE AT THE CELLULAR LEVEL

(Methods in Molecular Biology Series, Volume 6)

edited by Theodore P. Zacharia
National Academy of Sciences
Washington, D.C.

August, 1973

256 pages, illustrated

Immune Response at the Cellular Level examines procedures that are vital to the study of immunology and is written especially for the new investigator in the field. It describes specific methods, the reasons for their selection and results obtained through their use, and guides readers to more detailed works on immunology.

The topics in this book were chosen in order to comprehensively cover many areas of this field. The chapters examine quantitation and isolation of membrane-associated immunoglobulins, detection of immunoglobulin secretions by single cells, and the use of ferritin-tagged antibodies and immunohistochemical techniques in the isolation of antigens and antibodies. Among the other procedures discussed are the following: characterization of antigens of oncogenic viruses; investigation of immunological tolerance; and isolation of macrophages.

This volume is an excellent source of information for graduate students, research scientists, and laboratory technicians in the fields of immunology, immunochemistry, and cell biology.

CONTENTS: Approaches to the Quantitation and Isolation of Immunoglobulins Associated with Plasma Membranes, *S. Kennel, B. Del Villano, and R. Lerner*. Immunoglobulin Secretion by Single Cells, *E. Moticka*. Methods for Application of Ferritin-Tagged Antibodies, *S. Breese, Jr. and K. Hsu*. Immunohistochemical Techniques for the Localization of Antigens and Antibodies in Cells, Tissues, and Artificial Substrates, *J. Klassen*. Characterization of Antigens from Oncogenic Viruses, *T. Zacharia*. Methods for the Study of the Cellular Basis of Immunological Tolerance, *G. Habicht, J. Chiller, and W. Weigle*. Complement Components: Assays, Purification, and Ultrastructure Methods, *R. Stroud, H. Shin, and E. Shelton*. Isolation of Macrophage Populations, *J. Pisano*.

IMMUNOPATHOLOGY

Methods and Techniques

(Immunology Series, Volume 2)

edited by Theodore P. Zacharia
National Academy of Sciences
Washington, D. C.

and Sydney S. Breese, Jr.
Plum Island Animal Disease Laboratory
U.S. Department of Agriculture
Greenport, New York

November, 1973

272 pages, illustrated

This volume provides up-to-date, comprehensive coverage of new developments and techniques in the fields of immunopathology, immunology, and immunochemistry. All the contributing authors are active investigators and authorities in their respective areas of specialization. The detailed descriptions of methods, interpretations of results, and ample references in this book will be particularly valuable to new researchers.

This work examines many areas in immunology, for example: the immune receptor on the thymocyte plasma membrane, cellular mechanisms for the induction and maintenance of immunological tolerance, and immunological renal disease are explored at length. The book also includes discussions on the following topics: mechanisms of allergenic reactions, antibody-macrophage interaction and the immune response, immunoelectron microscopic applications of ferritin tagging, and acquired immunity against malaria.

Immunopathology: Methods and Techniques is of vital interest to new as well as experienced researchers and technicians in the fields of immunology, immunopathology, immunochemistry, and biochemistry.

CONTENTS

On the Problem of the Immunogen Receptor on the Thymocyte Plasma Membrane, *S. J. Kennel and D. A. Lawrence*. Cellular Mechanisms for the Induction and Maintenance of Immunological Tolerance, *G. S. Habicht, J. M. Chiller, and W. O. Weigle*. Immunological Renal Disease, *J. Klassen and G. A. Andres*. Antibody-Macrophage Interactions and the Immune Response, *J. C. Pisano and E. F. Miller*. Immuno-Electron Microscopic Applications of Ferritin Tagging, *S. S. Breese, Jr. and K. C. Hsu*. Approaches to the Study of Acquired Immunity against Malaria, *C. L. Diggs*. Molecular Mechanisms of the Human Allergic Response, *D. Ein*.

INSTRUCTIONS FOR PREPARATION OF MANUSCRIPTS FOR DIRECT REPRODUCTION

IMMUNOLOGICAL COMMUNICATIONS is a bi-monthly journal in the English language for the rapid communication of immunological information.

Directions for Submission to IMMUNOLOGICAL COMMUNICATIONS

One manuscript suitable for direct reproduction (see Instructions for Preparation), carefully inserted in a folder, and two copies of the manuscript must be submitted.

Reprints

Owing to the short production time for articles in this journal it is essential to indicate the number of reprints required upon notification of acceptance of the manuscript. Reprints are available in quantities of 100 and multiples thereof, in addition to the twenty (20) free copies provided to the author(s); a reprint price list will be sent to the author(s) with the notification of acceptance of the manuscript.

Manuscripts should be mailed to:

Editorial Office, The Center for Immunology
203 Sherman Hall, School of Medicine
State University of New York at Buffalo
Buffalo, New York 14214

INSTRUCTIONS FOR THE PREPARATION OF MANUSCRIPTS

Since all the contributions are reproduced by direct photography of the manuscripts, the following instructions must be strictly adhered to. Non-compliance will result in the return of the manuscript to the author(s) and delay in its publication.

Typing Instructions

1. Manuscript must be typewritten, double spaced, on good quality white bond paper measuring at least 8½ x 11 inches.
2. It is essential to use a black typewriter ribbon in good condition so that a clean and clear impression of the letters is obtained. Erasure marks, smudges, creases, etc., should be avoided. (Errors may be corrected by using white opaque correcting fluids or tapes).
3. All formulas and equations should be typed in or carefully prepared in permanent black ink, using drawing instruments.
4. The typing area of page 1, including the title, should be 6¼ by 8½ inches and that of all other pages 6¼ x 9½ inches. Make maximum use of the typing area.
5. Tables should be typed as part of the text but in such a way as to separate them from the text by a three-line space at both top and bottom of each table. The title "TABLE" (capitalized and followed by a Roman number) should precede the table and be centered on the page. Care should be taken that a table does not overlap onto the next page.
6. Drawings, graphs and other numbered figures should be drawn in black India ink (do not use blue ink) on a separate piece of white paper. Photographs should be glossy prints. Lettering set should be used for all labels on the figures or photographs; a typewriter may be used for labels. Captions for the figures should be

typed (single spaced) on a separate sheet, along the full width of the type page. The indication "FIGURE" should be capitalized and, with the figure's number (in Arabic numerals), centered above the caption. The numbers of the figures or photographs as well as the name(s) of the author(s) should be written in blue pencil on the back; the top of the picture should also be indicated on the back. The author(s) should indicate (with a blue pencil) the places in the text where the picture(s) should be inserted.

7. References (including footnotes) in the text will be numbered consecutively by numbers in parentheses. The full references (and footnotes) will be collected at the end of the text. The last names of all authors to any one paper, followed by their initials, shall be quoted. The title of the journal (Chemical Abstracts abbreviations), the volume number (underlined), the first page and the year should follow, in that order. Books should be cited similarly and include the publisher's name and location along with the year and edition of the book. Articles or chapters in books should be cited similarly and include the name of the editor(s) of the book and the page on which the article begins, as well as the volume number.

(journal): Thrasher, S. G., Doroszczak, N. and Cohen, S., J. Immun., 107:1394, 1971.

(book): Pressman, D. and Grossberg, A. L., The Structural Basis of Antibody Specificity. W. A. Benjamin, Inc., New York, 1968.

(article in a book): Milgrom, F., in International Convocation on Immunology, edited by N. R. Rose and F. Milgrom, p. 270, S. Karger, New York, 1969.

Format of Manuscripts

1. The entire title should be in capital letters and centered on the width of the typing area, at least two inches from the top of the page. This is followed by a one-line space and then by the name(s) and address(es) of the author(s), in the following way:

AUTOIMMUNE RESPONSES TO
THYROGLOBULIN IN THE RAT

T. J. Atkins and H. Z. Ginsberg
Departments of Microbiology and Pathology,
School of Medicine, State University of New York
at Buffalo, Buffalo, New York 14214
2. The title and the name and address of the author(s) are followed, after a three-line space, by an abstract, comprising less than 10% of the length of the text of the article. The abstract must be typed single-spaced and headed "Abstract".
3. After a three-line space, the article itself commences, whenever possible subdivided into sections such as "Materials and Methods," "Results," "Discussion," "Acknowledgments" and "References." The headings should be centered, underlined, and separated by one extra line space from the typed material that precedes and follows it.
4. Each page of manuscript should be numbered lightly at the bottom of the sheet, with a blue pencil.
